

SEBO G2 PROFESSIONAL

LIGHTWEIGHT, POWERFUL, RELIABLE

01 Flat to floor vacuuming
These machines work when completely flat, making it easy to clean under furniture. When upright the anti-fatigue technology makes vacuuming a one pass activity.

02 Full rotating brush roller
For deep-down fibre agitation and dirt removal. Lightweight with anti-fatigue technology. Carpet and soft floor tile manufacturers recommend this method of cleaning maintenance.

03 Manual brush height control
For varied pile height you can adjust the brush manually to 4 levels. This also increases brush life longevity, reducing service costs. A one-pass vacuum machine.

04 User friendly design
With three wheels, it glides along the floor. Has a built-in trap door for rapid blockage removal and indicator lights for easy operator guidance. Tool free access to the brush roller for easy cleaning

05 High performance filtration
Hygienic HEPA grade filtration system. Sealable filter bags for dust-free debris disposal. S-Class micro filters capture small-fine dust particles and the exhaust filter ensures only clean air is emitted.

06 Accessories built in
Neatly and conveniently stored on the machine are full sized hose, wand, crevice and upholstery nozzles for top to bottom cleaning.
