

CUTLERY CARE INSTRUCTIONS

To ensure long life and to retain the lustre of your cutlery, the following procedures are recommended:

Always rinse off cutlery immediately after use.

Wash in warm soapy water then rinse again thoroughly.

Never use abrasive detergents or scouring pads.

Dry with a soft cloth immediately after washing.

Do not leave cutlery to soak in water or store in damp conditions.

When using a dishwasher always follow the manufacturer's instructions and remove the cutlery immediately after the drying cycle.

To remove marks from your cutlery, it is recommended that a cleaner or polish for stainless steel is used. These can be purchased from your chemical supplier. Follow the manufacturer's instructions. Do not use silver polish on stainless steel as it will damage the surface.

Failing to follow the care instructions could lead to staining, discolouration and corrosion of the cutlery.
